The COMPANY acknowledges the CUSTOMER has paid a refundable deposit in the amount of \$ \_\_\_\_\_ and the CUSTOMER agrees to pay the following fees for the use of the following equipment:

1. 500 GALLON TANK SERIAL # 574225 \$ LOAN P/ YEAR  
INCLUDING ANY BLOCKS, REGULATOR, AND PIGTAIL Non-Refundable / Non-Transferable
2. OTHER: \_\_\_\_\_ SERIAL # \_\_\_\_\_ \$ \_\_\_\_\_ P/ YEAR  
Non-Refundable / Non-Transferable

### IMPORTANT SAFETY INFORMATION

**PROPANE IN ODORIZED.** Learn to recognize the odor of propane gas. To become familiar with the smell of propane, on your next gas delivery, ask your serviceman to demonstrate the odor of propane so that you and your family members will be able to detect this odor.

**IF YOU DETECT THE ODOR OF PROPANE,** you should immediately:

1. Extinguish all smoking material and other open flames. Do not operate any switches, thermostats, appliances or telephones.
2. Immediately get everyone out of the building, vehicle, trailer, or area.
3. Close all gas tanks or cylinder supply valves.
4. Use your neighbor's telephone to call us.
5. Do not re-enter the building, vehicle, trailer, or area and leave the gas turned off until the leak is found and repaired.

**HEATING WITH UNVENTED GAS APPLIANCES.** There is a danger of asphyxiation if you use ranges, ovens and unvented heaters for warmth. Oxygen in the room can be depleted. Carbon Monoxide can build up in an inadequately ventilated building and cause headaches, nausea and even death. Heavy moisture build-up on walls and windows is an indicator. If these conditions exist, immediately ventilate with fresh air. Then call us to locate and fix the problem.

**TAMPERING WITH GAS EQUIPMENT IS DANGEROUS.** Never tamper with, apply force to or use tools on the gas controls of your gas appliances. If the control knob will not operate easily by hand, the gas control must be replaced. Repair must be made only by a trained gas service technician.

**WARNING STATEMENT.** Propane is an extremely flammable gas. Propane vapor reduces oxygen available for breathing and may cause suffocation in confined spaces. Propane liquid may cause freeze burn similar to frostbite. Propane can contain small quantities of chemicals known to cause cancer or birth defects.

**IF YOU CAN'T LIGHT IT, DON'T FIGHT IT.** Before attempting to ignite a pilot light, read all manufacturer's instructions. A pilot light is designed NOT TO LIGHT if there is a problem. If a pilot light will not light, shut off your gas and call us.

**DON'T LET YOUR TANK RUN OUT OF GAS.** When you allow the tank to run out of gas, you create a potential hazard. If a gas valve has been left open and an appliance is moved or a gas line left open, a leak could occur when the system is recharged for propane. For comfort and safety, never let your gas system run out of propane.

**KNOW HOW TO CONNECT A PROPANE CYLINDER FOR USE.** Read and follow all instructions on the propane cylinder label. Read the instructions supplied by the manufacturer of your gas grill or appliance. If you don't have instructions or need assistance, call us. We can provide you with the necessary instructions and training.

I have also read and understand the above safety information and the Terms and Conditions on the back of this form.
